Phan Hong Linh (Link)

Senior Software Engineer

+84964976895 itlinhph@gmail.com Hanoi, Vietnam https://itlinhph.github.io

OBJECTIVE

A Senior Software Engineer with 8+ years of experience building large-scale, high-performance systems. A blockchain engineer, building trading platforms, processing large-scale on-chain and off-chain data.
I am now seeking a global company where I can continue to advance my career, gain more knowledge and become a Global Senior Engineer.

WORK EXPERIENCE

Minswap Lab Nov 2024 - Jun 2026

Senior Backend/Blockchain Engineer

Noodles.fi *(1st trading terminal on Sui)*:
- Core backend engineer responsible for building the product from scratch.
- Built and scaled a trading platform serving total 120K+ users, 300M+ requests/months, *3 TB* of off-chain data with near real-time synchronization *(<2 seconds behind on-chain events).*
- Optimized system performance to maintain zero slow database queries *(<1 second)* and zero slow background jobs *(<10 seconds).*
- Techstack: Golang, Typescript, Postgresql (TimescaleDB), R2, Redis, gRPC,…

Minswap.org *(1st dex on Cardano)*
- Acted as a performance engineering, investigating and resolving critical production performance issues across the Minswap ecosystem.

Giaohangtietkiem JSC Jun 2018 - Jun 2024

Project Manager/Technical Leader AI Platform May 2023 - Jun 2024
- Led a team of 15+ engineers, including Backend, Frontend, and AI Engineers. Built the team and product from scratch.
- Worked directly with the CEO, CTO, BA to collect requirements, make plans, research, and design the entire AI Platform system.
- Built an AI Platform supporting CRISP-DM phases: Labeling Platform, H2O, Kubeflow, Jarvis API Gateway, deployed in multi-GPU hardware, supported prediction both online and offline, served 10M requests/day, trained and deployed AI models. NLP service processed 1M chat messages/day, 300k error log messages/day. Vision services: Detect driver distractions in cabin *(~200 camera)*, extract COD images *(2M images/day).*
- Techstack: Python, MySQL, MongoDB, Kafka, Redis, Kubeflow, MinIO, SeaWeedFS, H2O,...

Technical Leader Saiyan - Performance Optimization & DBA Feb 2022 - Jun 2023
- Designed and implemented a Performance Monitor System, providing real-time insights and proactive alerts for performance issues (slow queries, access logs, error logs) of all GHTK systems *(1000+ physical servers, 100+ databases, 700M requests/day).*
- A key member of Database Administrators: Database optimization, reviewed all actions in GHTK databases *(20+ TB data, 4000+ tables).*
- Conducted stress test, periodically evaluated performance for each project, and suggested optimization strategies. Reduced lag of our main MySQL database (20TB) at peak times from *30 minutes* to less than *10 seconds.*
- Researched and trained new technologies related to High Performance. Became a backend internal trainer for 200+ IT Engineers. *(My lessons still being used for training util now)*

Technical Leader - WMS system Sep 2019 - Dec 2022
- Warehouse Management Systems: Controlled sorting devices in GHTK's warehouses (WCS, PLC, Crossbelt, Wheel sorters, sensors), sorted 100K packages/day/warehouse, increasing performance by 3 times compared to the old sorting system.
- APIs with response time < 100ms, 30M/day, ~350 msg/s (Kafka), Peak CCU: 3000 users, near real-time statistical data.
- Tech stack: Python Django, Flask, VueJS, MySQL, MongoDB, Redis, Kafka, Celery Task, MQTT,…

R&D Engineer Jun 2018 - Dec 2019
- Researched and developed AI and Big Data solutions
- Parse address system: Support parse address from texts, excel files, API,...

EDUCATION

Hanoi University of Science and Technology Aug 2014 - Dec 2018

Computer Science

Grade: Very good

SKILLS

Language	Proficient verbal and written English for working circumstances.
Programming Language	Golang, Python, Typescript, Move,… (Not limited. Strong ability to adopt new technologies quickly)
Database	PostgreSQL, MySQL, MongoDB, Redis, Kafka, Elasticsearch, TimescaleDB, large-scale db optimization.
Blockchain	Blockchain infrastructure, Sui ecosystem, indexers, smart contracts, on-chain/off-chain data systems.
