

Phan Hong Linh (Link)

Senior Software Engineer

✉ itlinhph@gmail.com ☎ (+84) 964 976 895 🏠 Ha Noi, Vietnam 🔗 itlinhph.github.io

SKILLS

Languages: Golang, Python, TypeScript, Move (strong ability to learn new technologies quickly)

Backend: Docker, distributed systems, microservices, high-performance & data-intensive systems

Blockchain: Infrastructure, Cardano & Sui ecosystems, indexers, smart contracts, RPC services, on-/off-chain data

Databases: PostgreSQL, MySQL, MongoDB, Redis, Kafka, Elasticsearch, TimescaleDB, large-scale DB optimization

Observability: ELK, Grafana, Sentry, New Relic, Elastic APM

Process: Jira, Agile / Scrum

AI: Familiar with AI/LLM services and concepts, prompt engineering, AI workflows and agents, AI-assisted development

Leadership: Managed & led teams of 15+ members

English: Professional working proficiency

EDUCATION

Ha Noi University of Science & Technology

Computer Science · Aug 2014 – Dec 2018

Graduation: **Very Good**

AWARDS

- ★ **2025** · Best Performance Award (Minswap)
- ★ **2024** · Highest performance review (Minswap)
- ★ **2023** · Highest performance rating (GHTK)
- ★ **2022** · Best Leader of the Year (GHTK)
- ★ **2021** · Multi-talented Developer (GHTK)
- ★ **2020** · Promise Leader of the Year (GHTK)
- ★ **2019** · Highest performance rating (GHTK)
- ★ **2018** · Highest performance rating (GHTK)
- ★ Consistently rated "Excellent" in all performance reviews (Top 10% of employees)

PROFILE

Senior Software Engineer with **9+ years** building large-scale, high-performance systems. Focused on **backend engineering, blockchain ecosystems, and performance optimization**. Seeking opportunities at global companies to solve challenging technical problems and grow as a Global Software Engineer.

EXPERIENCE

Minswap Lab

2024 – Now

Senior Backend / Blockchain Engineer

Sep 2024 – Now

Minswap.org — 1st DEX on Cardano (Team size: 16)

- ▶ Acted as the performance engineer across the Minswap ecosystem: optimized slow APIs and database queries; investigated and resolved critical production performance issues.
- ▶ Optimized the API & indexer: cut re-indexing time from **1 week to 6 hours**; improved **Minswap API v2** to deliver **<100ms** response times, serving **90K MAU** and **\$1B+ in total trading volume**.

Noodles.fi — 1st trading terminal on Sui (Team size: 6)

- ▶ Core backend engineer building the product from scratch.
- ▶ Built and scaled a trading platform serving **50K MAU, 300M requests/month**, and **3 TB of off-chain data** with near real-time sync (<2s behind on-chain events).
- ▶ Optimized performance to maintain **zero slow queries** (<1s) and **zero slow background jobs** (<10s).

Tech: Golang, TypeScript, PostgreSQL (TimescaleDB), Redis, gRPC, AWS, Kubernetes

Giaohangtietkiem.vn (GHTK)

2018 – 2024

Project Manager / Tech Lead — AI Platform

May 2023 – May 2024

- ▶ Built the team and product from scratch (Backend, Frontend, AI engineers); worked directly with CEO, CTO and BA to plan and design the entire AI Platform.
- ▶ Delivered an AI Platform (Labeling, H2O, Kubeflow, Jarvis API Gateway) on multi-GPU hardware, serving **10M requests/day**.
- ▶ Led in-house LLM adoption: **self-hosted Llama & PhoGPT on multi-GPU** (NVIDIA Triton, closed-source Qualcomm engine) powering an **internal RAG chatbot for customer service**.
- ▶ NLP processed **1M chat, 300K error-log messages/day**; Vision detected driver distraction (~200 cameras) and extracted **2M COD images/day**; recommendations for **100M+ customers**.

Tech: Python, LLM, RAG, Milvus, Kubeflow, Spark, Kafka, MySQL, MongoDB, Redis, MinIO

Tech Lead — Performance Optimization & DBA

Feb 2022 – Jun 2023

- ▶ Designed a real-time Performance Monitor System (slow queries, access & error logs) for all GHTK systems — **1000+ servers, 100+ databases, 700M requests/day**.
- ▶ Key DatabaseAdmin member optimizing and reviewing all actions across GHTK databases (**20+ TB, 4000+ tables**).
- ▶ Ran stress tests and drove optimization: **reduced peak lag of the main 20 TB MySQL database from 30 minutes to under 10 seconds**.
- ▶ Researched and trained new high-performance technologies; became a backend internal trainer for **200+ IT engineers** (lessons still used for training today).

Tech: Python, MySQL, ELK, Elastic APM, Redis, Kafka

Tech Lead — WMS System

Sep 2019 – Dec 2022

- ▶ Built Warehouse Management Systems controlling sorting hardware (WCS, PLC, Crossbelt, Wheel sorters, sensors), sorting **100K packages/day/warehouse** — **3x faster** than the legacy system.
- ▶ APIs at **<100ms** response, **30M requests/day**, ~350 msg/s (Kafka), peak 3000 CCU, near real-time statistics.

Tech: Python (Django, Flask), VueJS, MySQL, MongoDB, Redis, Kafka, Celery, MQTT

R&D Engineer

Jun 2018 – Dec 2019

- ▶ Built a **parse-address** system (text, Excel, API) and an **identity-identification** system validating ID-card info of newly registered shops.
